

# MEGAMENGER

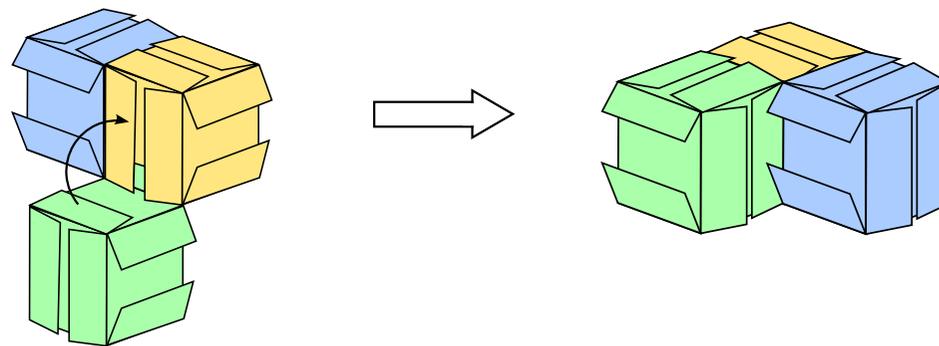

## How to build a single tripod

**WARNING:** Don't build a mirror image by accident! It will not link with other tripods. When you look at the tripod in the last step, the tabs must be horizontal on the left and vertical on the right.

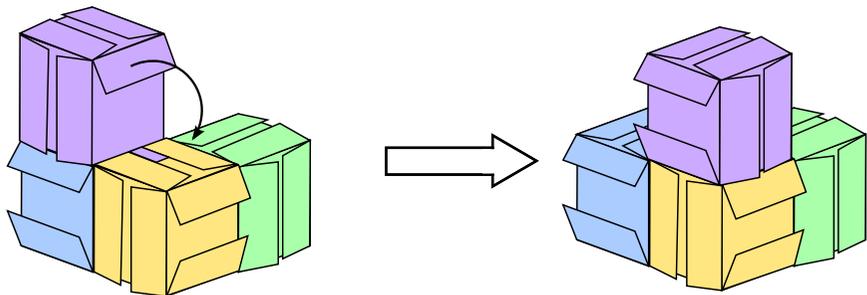

**Step 1.** Link two cubes together to build a column.

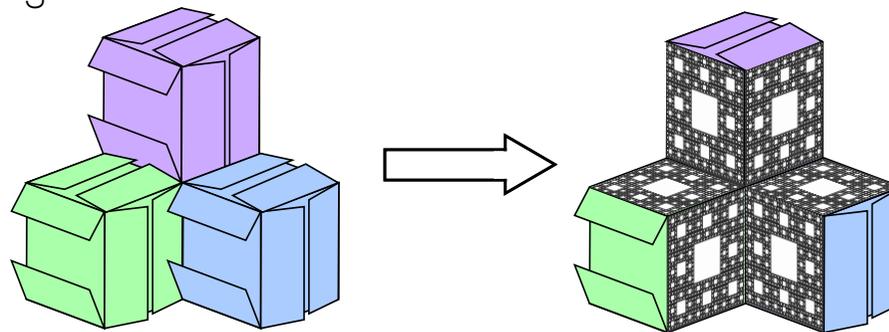

**Step 2.** Link a third cube to the column to form a base.

**Step 3.** Add the fourth cube to the base.

**Step 4.** Panel the six internal faces of your tripod before joining it to other structures.

Don't forget to put both tabs in when you are linking cubes together!!
